Broadband availability

Fixed-broadband availability for any US address — the share of homes reached by 100/20 Mbps broadband and gigabit, whether fiber and cable are available, and who provides service — for its census block group, tract, and county, from the FCC Broadband Data Collection.

1600 Sample Way, Springfield, USA

Sample County

88th
national percentile
broadband here ranks at or above 88% of US block groups

Wired broadband (100/20 Mbps) reaches 98.8% of homes in this neighborhood. 100% counting fixed wireless and satellite. Gigabit reaches 97%. Wired options include fiber, cable. 6 providers serve the area, 2 of them wired.

Availability by geography

	BLOCK GROUP	TRACT	COUNTY
Homes (serviceable locations)	165	675	123,498
Broadband (100/20 Mbps)	100.0%	99.7%	99.1%
of which wired	98.8%	97.4%	95.2%
Gigabit	97.0%	94.1%	88.6%
Fiber available	**Yes**	**Yes**	**Yes**
Cable available	**Yes**	**Yes**	**Yes**

Percentages are shares of the FCC's Broadband-Serviceable Locations (an exact count). ⚠ marks an area with few homes, where a single location swings the percentage.

Providers serving this block group (6)

Wired
Verizon Fios Fiber
Astound Broadband Cable

Fixed wireless
Starry Fixed Wireless
T-Mobile Fixed Wireless

Satellite
HughesNet Satellite
Starlink Satellite

Glossary

100/20 Mbps
The FCC's current broadband benchmark: 100 Mbps download / 20 Mbps upload.

Gigabit
1000 Mbps download service — the top consumer tier.

Fiber
Fiber-to-the-home, generally the fastest and most reliable wired service.

Availability reflects locations where a provider reports it can offer service; verify serviceability with the provider. Source: FCC Broadband Data Collection — residential fixed broadband (FCC BDC Dec 2025).
